

SUBJECT: #860 / #870 Vette Panel Adhesive / Filler

Evercoat Vette Panel Adhesive / Filler can now be used as a replacement for #994 SMC Panel Adhesive.

Evercoat Vette Panel Adhesive / Filler is a quick-setting, polyester adhesive designed for light bonding of fiberglass and now SMC. It sets up quickly and provides for easier finishing than many epoxy repair products with less repair mapping associated with using dissimilar chemistries. Vette Panel Adhesive / Filler can be used with fiberglass cloth or mat for general repairs and for fixing small holes.

Vette Panel provides a working time of 8-10 minutes. Parts should remain clamped for up to 12 hours. Full bonding strength is achieved within 24 hours.

Refer to the product label or Technical Data Sheet for application procedures.

NOTE: When repairing or replacing large SMC panels which require longer working time and stronger adhesion, use Evercoat Panel Bonding Adhesive.
